

Ultrasonic sensors

MIC+130

MIC+340

MIC+600

Description

The mic+sensor with one switched output measures the distance to an object within the detection zone contactless. Depending on the adjusted detect distance the switched output is set.

All settings are done with two push-buttons and a three-digit LED-display.

ATTENTION ⚠: The sensors are not considered as safety equipment and may not be used to ensure human or machine safety.

- The sensors can be adjusted manually by means of a numerical LED-display
- Luminous diodes indicate the status

	Detection zone	Dead zone
MIC+130	1300mm	0 to 200 mm
MIC+340	3400mm	0 to 350 mm
MIC+600	6000mm	0 to 600 mm
